

SOLUTIONS FOR HIGHER EDUCATION

Audio that's ready for anything

Higher education is evolving — fast. If you're looking for solutions for your HyFlex and hybrid learning spaces, you need technology that can keep up.

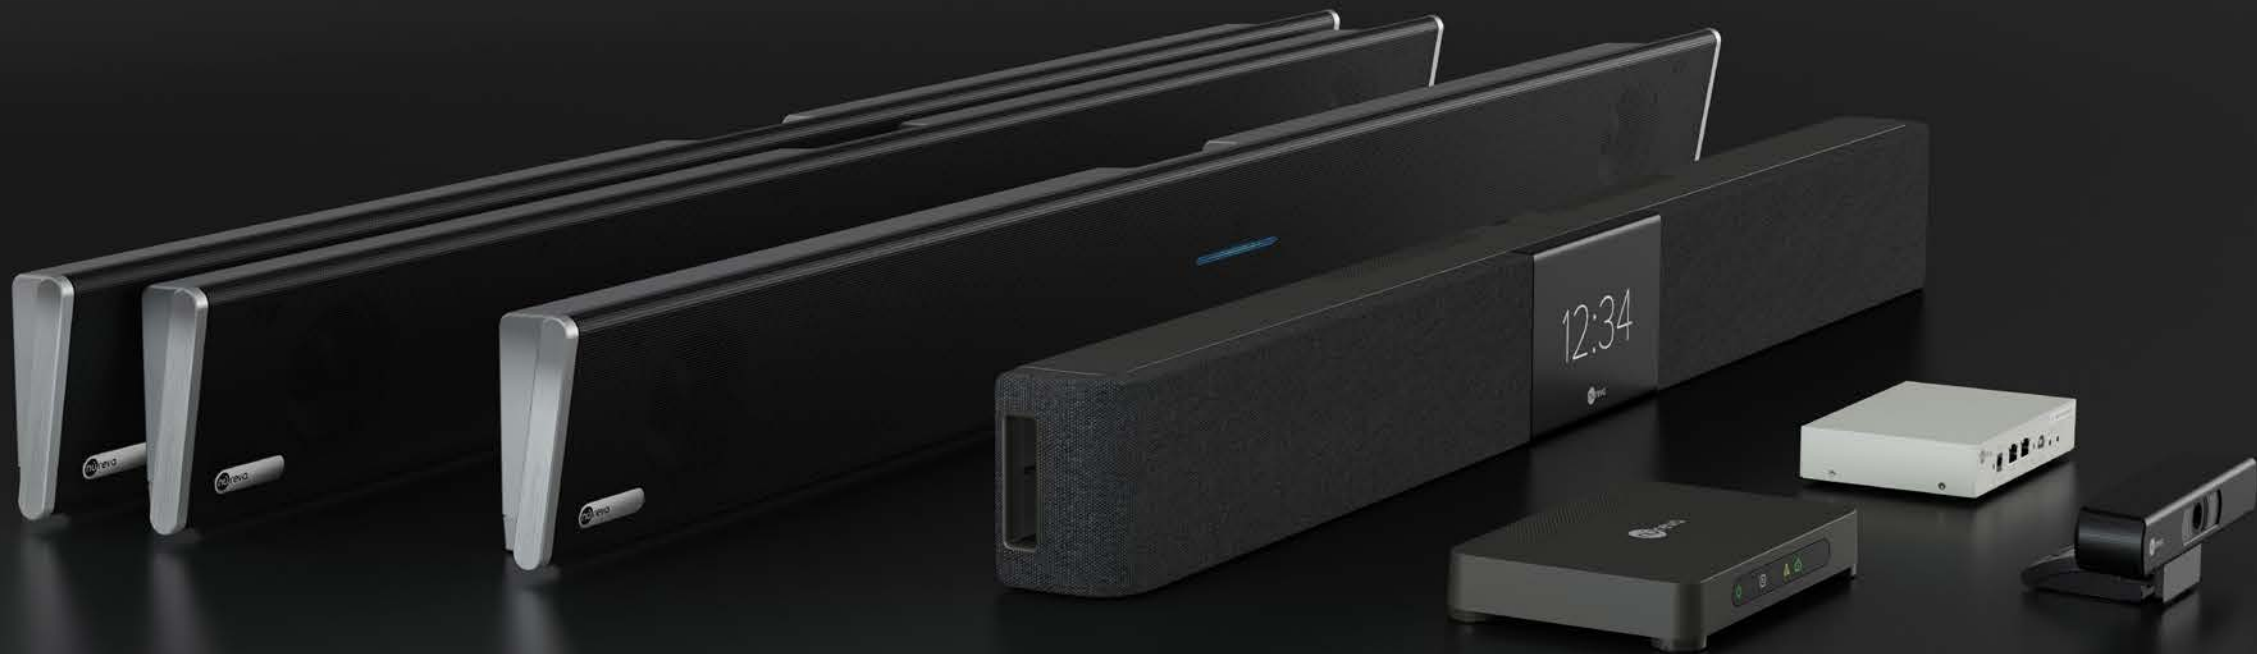

At Nureva, we offer the easiest and most cost-effective way to equip your classrooms — with no need for lapel mics or expensive multicomponent setups. It's all thanks to our patented Microphone Mist™ technology, which fills a space with thousands of virtual microphones. Voices are picked up in every inch of a classroom — no matter where people sit, face or move.

With Nureva® audio, instructors can teach as they always have, connecting with students naturally no matter where they are. Students can hear and be heard clearly, whether they're sitting in a classroom or joining from home or a dorm room. And IT staff can easily manage multiple spaces without going room to room to make adjustments.

Nureva audio — built for the shift to hybrid and ready for anything.

Engaging remote students

Let's face it — if students can't hear what's going on, they can't engage. Our products give remote students as close to an in-class experience as they can get.

Why choose Nureva audio?

Be heard everywhere

Ensure voices are picked up from the entire classroom. Remote students can hear both their instructor and fellow students clearly, without anyone in the room having to wear or share a microphone.

Easy and adaptable

Quickly install a system with no need for specialized skills or tools. Then reconfigure spaces as much as you need — the system automatically adjusts. USB plug and play connectivity keeps everything simple.

Ready for the future

Minimize classroom visits with secure, cloud-based tools that let IT staff manage from anywhere. Firmware updates and added software functionality keep your systems performing well over time.

Microphone Mist™
technology

Classroom audio, evolved

Our groundbreaking Microphone Mist technology fills a classroom with thousands of virtual microphones, so everyone can be heard, everywhere. It's the brains behind every Nureva system.

The virtual microphone difference

For HyFlex and hybrid learning to succeed, postsecondary institutions need tools that set everyone up for success. Microphone Mist technology keeps engagement high and costs and hassles low. Here's how.

Full-room coverage

No matter where someone is speaking in the classroom, there's always a virtual microphone nearby. Remote students will have the same experience as those learning in person.

Continuous autocalibration

Our audio always works no matter how often you reconfigure a space — there's no need to make adjustments to the system setup or install new components.

No handheld mics

With Nureva, instructors never need to wonder if a microphone is charged or wait for students to pass one around. That's because there are no handheld mics.

Voice Amplification Mode

How it works

Voice Amplification Mode makes it easier for students in the room to hear their instructor — without compromising the remote audio experience. Just connect a wireless headset microphone to an HDL300, an HDL310 or an HDL410 system, and the instructor's voice is broadcast clearly through our speakers.

How it helps

With Nureva, you don't need to make a tough choice between effective in-room audio and effective audio conferencing. Voice Amplification Mode creates a great listening experience for everyone — whether in the classroom or joining remotely — without requiring instructors to strain their voices.

Integrated speakers

Every Nureva audio system includes two built-in 20-watt speakers per bar, so in-person students and instructors can hear just as clearly as those who are remote. You can also easily connect our audio systems to your external speakers.

Better conversations

Ensure remote students can always be heard when they ask questions and join discussions.

Clear playback

Play multimedia material directly, avoiding the need to use underpowered display speakers.

Flexible placement

Install your system exactly where it needs to go, so audio can be heard throughout the entire classroom.

Made for flexibility

Nureva audio is built to adapt to a variety of HyFlex and hybrid learning scenarios. It's also a natural fit in meeting and conference rooms. Anytime you need to connect remote participants with those in the room, you have the tools to make the experience engaging and effective.

HyFlex and hybrid learning

Get the flexibility you need to make your HyFlex and hybrid courses successful. Our systems pick up student voices in every inch of a space, so those in person can ask questions and take part in discussions without interrupting the flow of class — remote students will still hear everything. And no matter how many times you rearrange furniture to accommodate student and instructor choices, our audio just adjusts.

Hybrid meetings and conferences

Equip your faculty spaces with the same easy tools so professors, instructors and staff can attend meetings and conferences from anywhere — without compromising anyone's ability to engage and contribute. With Nureva, committee meetings, faculty meetings, academic conferences and more easily accommodate remote participants, saving on travel time and expense.

Easy does it

Instructors need to spend their energy reaching their students. There's no time to master complicated technology products. That's why we designed Nureva audio to do the hard work behind the scenes so faculty don't have to.

Pro AV performance for extra-large rooms

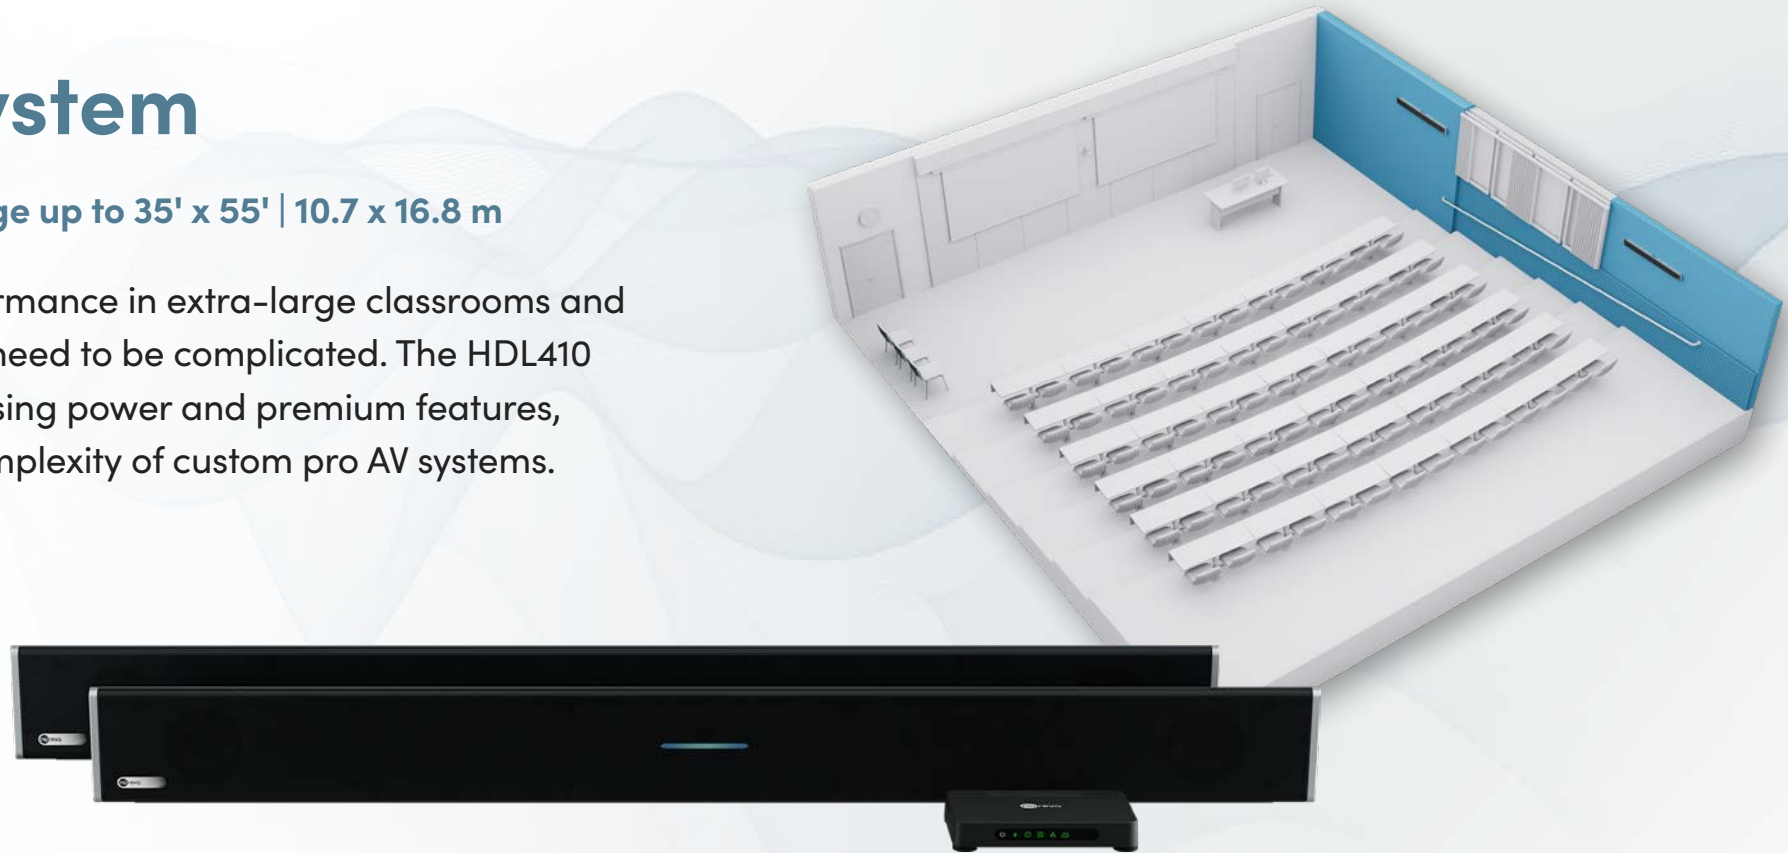

HDL410 system

For microphone coverage up to 35' x 55' | 10.7 x 16.8 m

Getting pro audio performance in extra-large classrooms and meeting rooms doesn't need to be complicated. The HDL410 offers advanced processing power and premium features, without the cost and complexity of custom pro AV systems.

[Learn more](#)

Pro AV performance for large rooms

HDL310 system

For microphone coverage up to 30' x 30' | 9.1 x 9.1 m

Discover the simple and scalable way to get great audio performance in large classrooms and meeting rooms. The HDL310 is your no-compromise alternative to all-in-one sound bars that have a limited microphone pickup range and custom AV systems that are costly and complex.

[Learn more](#)

The alternative to pro AV for large rooms

HDL300 system

For microphone coverage up to 25' x 25' | 7.6 x 7.6 m

8,192 virtual microphones offer full-room coverage in large classrooms and meeting rooms, without the complications of a traditional pro AV system. Installation takes less than 30 minutes and requires no specialized skills or tools.

[Learn more](#)

Powerful audio system for medium-sized rooms

HDL200 system

For microphone coverage up to 18' x 18' | 5.5 x 5.5 m

4,096 virtual microphones offer full-room coverage in medium-sized seminar rooms, flex spaces and meeting rooms. Install in less than 30 minutes on a wall or mount on a mobile cart.

Nureva Console

Keep everything on track

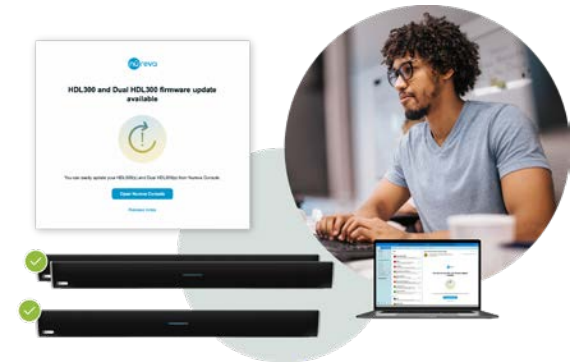

Remotely install firmware updates, check device status, change settings, access developer APIs and more — all from a secure, cloud-based platform. Nureva Console is included with the purchase of any Nureva device.

Tools to save IT time

Remote management

Avoid frequent trips to your classrooms by logging in remotely to install firmware updates, check device status, change settings and more.

Intelligent monitoring

Quickly resolve problems before they impact your spaces with email alerts (available with Nureva Pro), third-party camera monitoring and a room status dashboard.

Analytics and insights

Gain a deeper understanding of your classrooms with acoustic and usage data, allowing you to fix issues right away and identify opportunities for improvement.

Customized control

Versatile APIs make it easy to integrate your Nureva devices with other products or automate tasks to save time. The result is a better experience for everyone.

Nureva Pro

Extra protection for your spaces

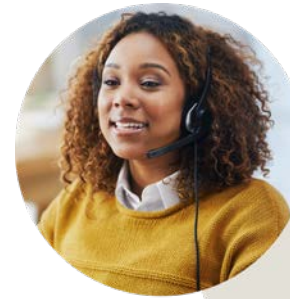

Get everything you need to keep your spaces running smoothly, with no surprises. Nureva Pro includes expanded support hours, advance hardware replacement and enhanced capabilities in Nureva Console. A 2-year subscription is included with every device purchase — then add up to 3 years to extend your warranty.

Comprehensive services and enhanced management

Extended warranty

Extending your Nureva Pro subscription adds up to 3 years to your warranty, beyond the 2-year warranty that comes standard with our products.

Expanded support

Get access to knowledgeable experts when you need them. With Nureva Pro, support is available 20 hours a day (5 days a week) to quickly resolve issues.

Advance hardware replacement

Ensure your classrooms get back up and running quickly if a device has issues. If we can't resolve a problem, we will ship a replacement unit to you the next business day.

Enhanced Nureva Console features

Unlock enhanced features in Nureva Console, including email alerts, acoustic insights, historical usage data and a room data API.

Book a demo

Hear the revolutionary performance of Microphone Mist technology in a real space and have all your questions answered in just 15 minutes.

What to expect

- A 15-minute live demo from a large room
- Examples of how organizations like yours are using our products
- No hard sell — we'll help you see if our product is right for you
