

SOLUTIONS

FOR HIGHER EDUCATION

Audio for students, faculty and AV/IT

Higher ed audio has to strike a balance.

You need high-performance systems that provide an engaging audio conferencing experience for remote and in-class students. And these solutions must allow instructors to teach as they always have, connecting with students naturally no matter where they are.

You also need solutions that allow busy AV/IT pros to make the most of their resources — time, equipment and budget. Installing, managing and supporting your systems has to be simple, without the requirement for specialized technicians.

We've designed our audio systems to meet all the needs of everyone in higher ed, from students to faculty and AV/IT. See how we deliver.

“Nureva is the perfect choice to fulfill our goal of building classrooms that are collaborative, scalable and affordable.”

Gary Kirk

Broadcast Engineer, UNC-Chapel Hill

We've got you covered

Engaging audio

True full-room mic pickup and a range of advanced audio features make hybrid and HyFlex learning feel seamless and natural. Our Adaptive Voice Amplification feature gives instructors a volume boost for easier engagement in the class. And our systems work easily with leading lecture capture platforms for high-quality recordings.

Simplified systems

Each Nureva® system is an all-in-one plug and play solution. No extra speakers or cables to buy. No custom DSP programming. Continuous autocalibration means you can rearrange a room without manual audio adjustments. Online tools let you easily manage your system and install regular updates from anywhere. Sound location data simplifies automatic camera switching.

**Our HDL pro series systems
are HETMA approved.**

Microphone Mist™
technology

Full-room mic pickup

Our groundbreaking Microphone Mist™ technology fills a classroom with thousands of virtual microphones, so everyone can be heard, everywhere. It's the brains behind every Nureva system.

The virtual microphone difference

For HyFlex and hybrid learning to succeed, postsecondary institutions need tools that set everyone up for success. Microphone Mist technology keeps engagement high and costs and hassles low. Here's how.

Full-room coverage

No matter where someone is speaking in the classroom, there's always a virtual microphone nearby. Remote students will have the same experience as those learning in person.

Continuous autocalibration

Our audio always works no matter how often you reconfigure a space — there's no need to make adjustments to the system setup or install new components.

No handheld mics

With Nureva, instructors never need to wonder if a microphone is charged or wait for students to pass one around. That's because there are no handheld mics.

Adaptive Voice Amplification

How it works

Adaptive Voice Amplification makes it easier for students in the room to hear their instructor — without compromising the remote audio experience. For an HDL310 or HDL410 system, connect an external microphone using the Nureva App, and the instructor's voice is clearly broadcast through our speakers. A headset mic can be used with the HDL300.

How it helps

With Nureva, you don't need to make a tough choice between effective in-room audio and effective audio conferencing. Adaptive Voice Amplification creates a great listening experience for everyone — whether in the classroom or joining remotely — without requiring instructors to strain their voices.

Integrated speakers

Every Nureva audio system includes two built-in 20-watt speakers per bar, so in-person students and instructors can hear just as clearly as those who are remote. You can also easily connect our audio systems to your external speakers.

Better conversations

Ensure remote students can always be heard when they ask questions and join discussions.

Clear playback

Play multimedia material directly, avoiding the need to use underpowered display speakers.

Dynamic boost

Choose stronger speaker output for noisier classrooms and improve the intelligibility of a variety of audio sources.

Made for flexibility

HyFlex and hybrid learning

Our systems pick up student and instructor voices in every inch of a space. Remote students feel like they are on campus with their peers while in-class participants can speak naturally. And no matter how many times you rearrange furniture to accommodate student and instructor choices, our audio just adjusts.

Hybrid meetings and conferences

The same easy solutions are also ideal for your faculty spaces. Remote and on-site participants in committee meetings, faculty meetings and academic conferences are easily accommodated. Professors, instructors and staff can attend from anywhere, allowing significant savings on travel time and expense.

Lecture capture

Successful asynchronous learning requires high-quality lecture capture. Our advanced microphone technology ensures you get crisp, clear recordings so students can fully engage with course content at any time and from anywhere.

Pro AV performance for extra-large rooms

HDL410 system

For microphone coverage up to 35' x 55' | 10.7 x 16.8 m

Getting pro audio performance in extra-large classrooms and meeting rooms doesn't need to be complicated. The HDL410 offers advanced processing power and premium features, without the cost and complexity of custom pro AV systems.

[Learn more](#)

Pro AV performance for large rooms

HDL310 system

For microphone coverage up to 30' x 30' | 9.1 x 9.1 m

Discover the simple and scalable way to get great audio performance in large classrooms and meeting rooms. The HDL310 is your no-compromise alternative to all-in-one sound bars that have a limited microphone pickup range and custom AV systems that are costly and complex.

[Learn more](#)

Economical option for large rooms

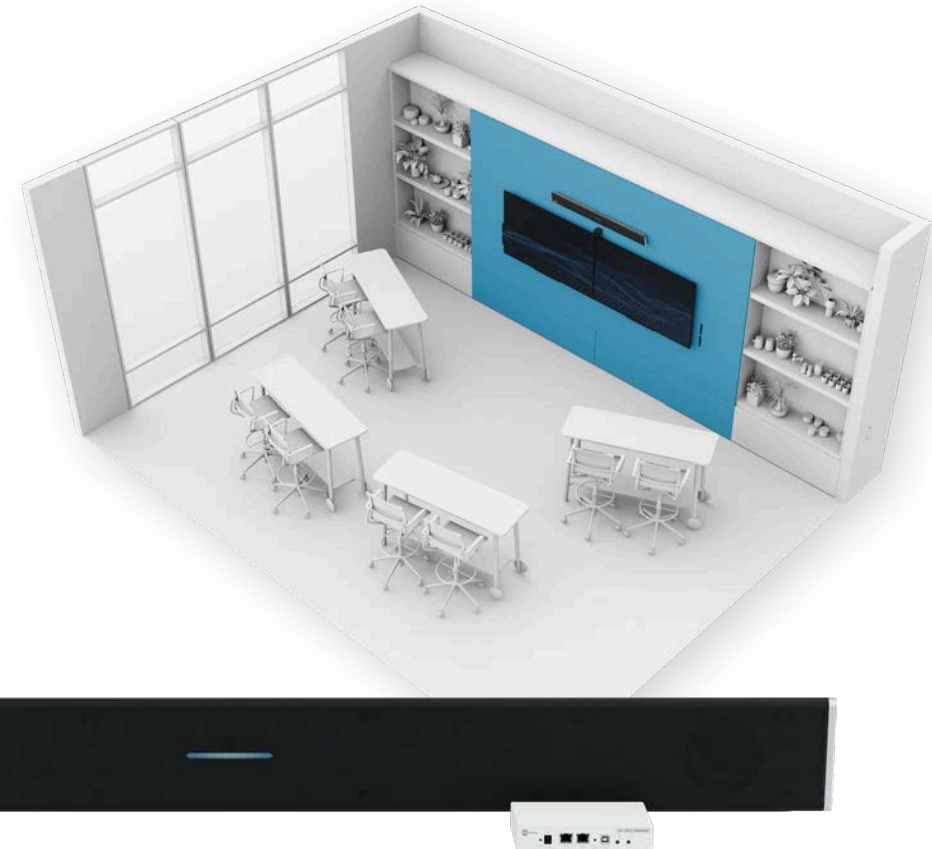

HDL300 system

For microphone coverage up to 25' x 25' | 7.6 x 7.6 m

Thousands of virtual microphones offer full-room coverage in large classrooms and meeting rooms, without the complications of a traditional pro AV system. Installation takes as little as 30 minutes and requires no specialized skills or tools.

[Learn more](#)

Powerful audio system for medium-sized rooms

HDL200 system

For microphone coverage up to 18' x 18' | 5.5 x 5.5 m

Thousands of virtual microphones offer full-room coverage in medium-sized seminar rooms, flex spaces and meeting rooms. Install in as little as 30 minutes on a wall or mount on a mobile cart.

Nureva Console

Keep everything on track

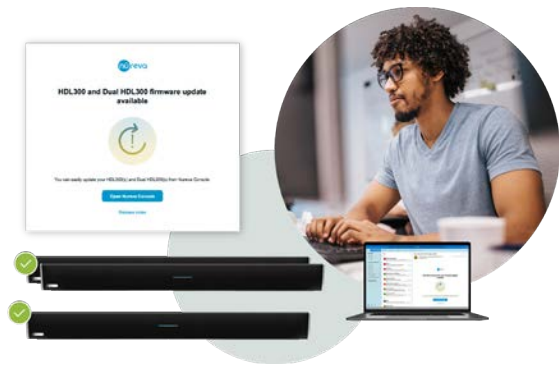

Remotely install updates, check device status, change settings, access developer APIs and more — all from a secure, cloud-based platform. Nureva Console is included with the purchase of any Nureva device.

Tools to save IT time

Remote management

Avoid frequent trips to your classrooms by logging in remotely to install updates, check device status, change settings and more.

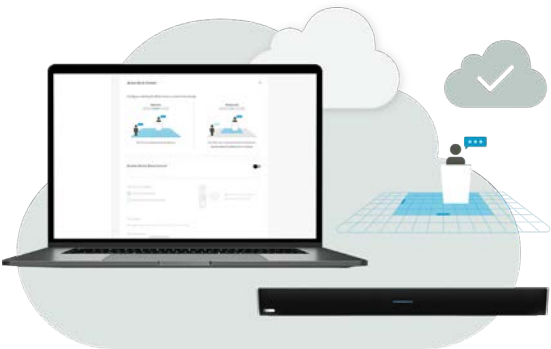

Intelligent monitoring

Quickly resolve problems before they impact your spaces with email alerts, third-party camera monitoring and a room status dashboard.

Analytics and insights

Gain a deeper understanding of your classrooms with acoustic and usage data, allowing you to fix issues right away and identify opportunities for improvement.

Customized control

Use our versatile APIs to integrate your Nureva devices with other products or automate tasks to save time. The result is a better experience for everyone.

Nureva App

Intuitive setup and configuration tools

Get started quickly and easily with the Nureva App. You can analyze room acoustics to determine the best place to install your system. You also get tools to optimize and customize both the in-room and remote audio experiences and keep your device up to date.

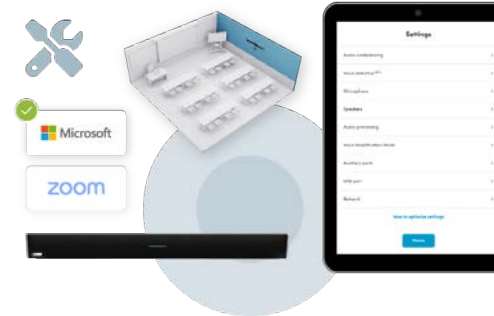

Fast-track your device setup

Streamline setup

Use your iOS device to measure room acoustics and get an acoustic score. Then install your pro series system with confidence using the handy tips in our setup guide.

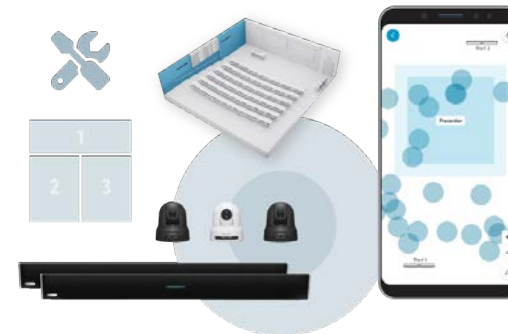

Customize and optimize

Tailor your audio system with simple controls, such as Microsoft® Teams and Zoom settings, dynamic boost for stronger speaker output and Adaptive Voice Amplification.

Stay up to date

Update your device with a single click, without having to put it on your network. With ongoing feature updates, your system will only get better with time.

Simplify camera switching

Make automated camera switching simple and effective, thanks to sound location data and AI-enabled voice detection. Available with the HDL410 system.

Nureva Pro

Extra protection for your spaces

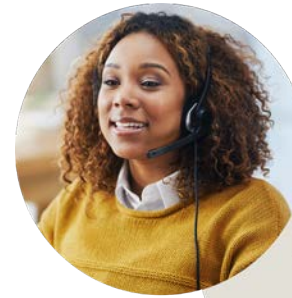

Get everything you need to keep your spaces running smoothly, with no surprises. Nureva Pro includes expanded support hours, advance hardware replacement and enhanced capabilities in Nureva Console. Two years of Nureva Pro are included with every device purchase, and you can add up to 3 years to extend your warranty.

Comprehensive services and enhanced management

Extended warranty

Extending your Nureva Pro subscription adds up to 3 years to your warranty, beyond the 2-year warranty that comes standard with our products.

Expanded support

Get access to knowledgeable experts when you need them. With Nureva Pro, support is available 20 hours a day (5 days a week) to quickly resolve issues.

Advance hardware replacement

Ensure your classrooms get back up and running quickly if a device has issues. If we can't resolve a problem, we will ship a replacement unit to you the next business day.

Enhanced Nureva Console features

Unlock enhanced features in Nureva Console, including acoustic insights, historical usage data and a room data API.

Experience our audio

Our 15-minute online demo is your opportunity to:

- Hear the quality of our audio in a large room.
- Get advice on equipping your spaces — no pressure.
- Ask about an easy on-site evaluation on your campus.
