

Dual HDL300 system

The Dual HDL300 system is comprised of two integrated microphone and speaker bars that provide true full-room microphone coverage and rich, clear playback in any large space up to 30' x 50' (9.1 x 15.2 m) – including large meeting rooms, classrooms, flex spaces and more.

True full-room microphone coverage

Like all Nureva® systems, the Dual HDL300 is powered by patented Microphone Mist™ technology, which fills a space with thousands of virtual microphones. Just two integrated microphone and speaker bars provide true full-room coverage – compare that to traditional systems that use multiple components and still may leave dead zones where people can't be heard. Continuous autocalibration means your audio is always optimized – no technician required – even if you change the room layout.

Easy installation

Installing the Dual HDL300 is an easy project that takes about 60 minutes. You hang each unit on the wall with two screws, run one cable from each unit to the connect module and another to a computer. Compare that to traditional systems for large spaces that may include choosing and installing multiple mics, speakers, cables and a DSP – a process that can take days and require outside technicians.

Manage from anywhere

The Dual HDL300 and all your Nureva audio conferencing systems can be managed from anywhere with Nureva Console – our secure cloud-based platform included with each system. Check device status, fine-tune audio settings, adjust the microphone pickup zone, activate voice amplification, update firmware and more. You can also access the Nureva Developer Toolkit – cloud-based APIs that let you create integrations for streamlining your workflows.

Features

- **Intelligent Sound Targeting** stops virtual microphones from picking up persistent unwanted sounds like HVAC so remote callers get a better listening experience
- **Position-based gain control** applies gain separately to each sound in a space, resulting in a natural listening experience
- **Simultaneous pickup** – processes all virtual mics simultaneously so conversations sound natural even if two people speak at the same time
- **Voice Amplification Mode** lets presenters use a headset mic to amplify their voice in the room while ensuring remote participants can also clearly hear on-site participants
- **Active Zone Control** allows you to designate a zone where microphone pickup is maintained while pickup in the rest of the space is reduced
- **Integrated processing** requires no separate DSP as all processing is integrated into the device
